## Education

---

### Jawn University

Expected: May 2024

- BS in Computer Science • Honors Program • President's Scholar: Full-Tuition
- Courses: Introduction to Academic Computer Science, Math Concepts in Computing I (Discrete Mathematics)

## Experience

---

### Department of Energy (DOE) Lab Intern

October 2019 - December 2019

- Designed circuitry for a Langmuir probe, a device used to measure properties of plasmas like density and temperature.

## Projects

---

### 2-Factor Authentication With a Calculator

(C, HMAC, SHA1, OTP)

- Provided rolling passcodes similar to Google Authenticator and Duo except on a TI-84+ CE graphing calculator.
- Implemented One-Time Password (OTP) algorithms based on [RFC 4226](#) (HOTP) and [RFC 6238](#) (TOTP) specifications based on a custom implementation of the HMAC algorithm (for learning purposes).

### Calculator Controlled RC Boat

(C++, TI-BASIC, Arduino)

- Utilized an Arduino and RF wireless modules with a C++ library called ArTICL to interface with a TI-84+ graphing calculator to remotely control a boat.
- Tracked down and fixed a bug in the library that prevented the Arduino from properly interfacing with the specific calculator model.

### Water Utilization Dashboard

(React, Flask, Websockets, Material-UI, ESP8266 WiFi Module)

- Developed a water usage tracking platform using vibration sensors to determine when water was being used and a wifi module to communicate with a Flask backend server via Websockets.

### COVID Data Web Scraper and Discord Bot

(Python, Flask, SQLite, Rust, Highcharts.js, Heroku)

- Scraped the number of covid cases from the university website and displayed detailed cases vs. time graphs and bar charts with breakdowns of employees and on/off campus students via Flask and Highcharts.
- Wrote a bot in Rust to interface to provide close to real time COVID data to various university Discord servers.

### College Rejection Simulator

(HTML, CSS, Javascript, Bootstrap, Netlify)

- Helped over 30,000 high schoolers in 25 countries prepare for college rejection letters with an interactive simulation.

## Skills

---

**Programming Languages/Frameworks:** C, C++, Python, Flask, Javascript, x86 ASM

**Markup Languages:**  $\LaTeX$ , Markdown, HTML, CSS

**Other:** Linux, Bash, Git/Github, Tmux, Vim (Neovim), Arduino, REST APIs, GDB (GNU Debugger), Binary Exploitation, Basic Reverse Engineering

## Awards/Activities

---

### CTF (Capture the Flag Computer Security Competitions):

- 1st at beanCTF20 (out of 500) • 2nd at BirdHacks RSM CTF • 4th at RandoCTF 2020 (out of 1017) • 4th at AnotherCTF2020 (out of 1047)
- 25th at PicoCTF 2019 (out of 11722) • 35th at CTF 2019 (out of 483) • 13th at DefenseCTF 2019 (out of 262)

**Member:** Jawn Association for Computing Machinery (ACM)

**Member:** Jawn Hack-a-Hardware / Computer Security Club
